## FGRIO-M Industrial 900 MHz Radio

### Overview:

The FreeWave® Technologies FGRIO System provides outstanding performance and versatility in wireless transmission of process-control signals. FGRIO offers “transparent” acquisition, transport and reconstruction of analog, digital and power signals, eliminating the need for associated buried wiring. The RTU requires no altered programming. The FGRIO is Class 1 Division 2 approved and is lower-cost and provides better signal integrity than vulnerable wiring.

### Features:

- Frequency Hopping— Communication and diagnostics between the IO Master and the IO Slaves.
- Affordable—Low installation and long-term maintenance costs.
- Low latency – Less than one second signal delay.
- High Accuracy – FGRIO System analog signal fidelity is factory calibrated and drift with time and temperature is much less than that of transducers.
- Short Range/Low power – Suitable for solar powered installations.
- Error Free Communications – 32 bit CRC with automatic retransmission.
- Industrial Grade Specifications – 100% tested for RF performance from -40°C to +75°C.
- Master Input voltage range— Input voltage range is 6-30 VDC at full RF output power.
- Noise Immunity – Superior performance in noise congested environments.
- Secure – proprietary spread spectrum technology prevents unauthorized access.
- Slave Radio – Accepts 2 Digital Inputs (DI), 2 Analog Inputs (AI) and switches 2 Digital Outputs (DO).
- Master Radio – Mirrors signals for up to 4 Slaves and provides Link and Command Alarm signals.
- Wire Replacement –FGRIO System accuracy is not diminished by distance as it may be in wired systems.
